How to Take a Full-Page Screenshot in Chrome and Firefox

If you're looking for a way to take a full-page screenshot on Chrome or Firefox, these free tools are worth checking out.

There shouldn't be any difficult part when it comes to taking a screenshot. However, you might struggle to fit all the relevant information and have no choice but to put together separate screenshots using a photo editor.

The good news is that you can avoid this headache by using free Chrome or Firefox extensions, or built-in tools.

How to Take a Full-Page Screenshot in Google Chrome

If your default browser is Google Chrome, there are plenty of options you can use to take a full-page screenshot:

- [Screen Capture](#)

- [Scrnl](#) [Screenshot & Screen Video Recorder](#)
- [GoFullPage](#)
- [Screenshot Master: Full Page Capture](#)

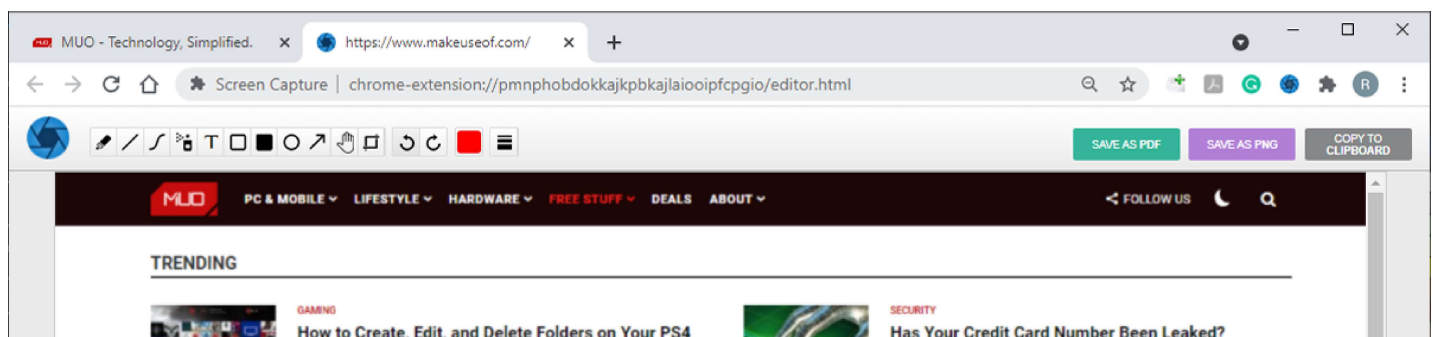

ScreenCapture is one of the best extensions available for Chrome.

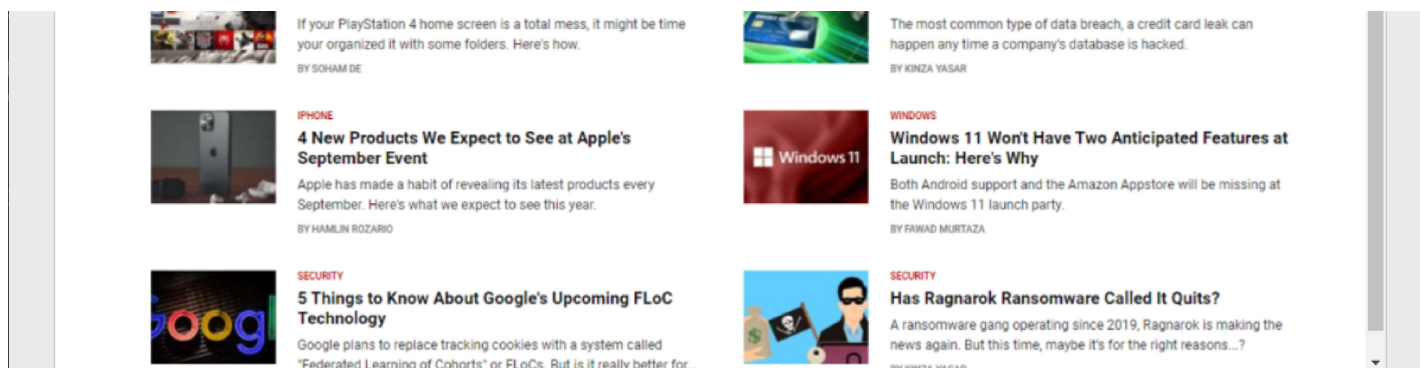

How to Take a Full-Page Screenshot Using ScreenCapture

To access the extension's menu, all you have to do is click its icon. If you need to take a screenshot of the entire page, select **Whole page screenshot**. ScreenCapture will scroll by itself the entire page and will open a new tab that contains the screenshot.

 Google Chrome screenshot

Using ScreenCapture, you can edit your screenshots without having to open another app or website. You can add text, arrows, or other elements using the extension. When you've finished editing, you can save it as PDF, PNG, or copy it to your clipboard.

If you need more control over the screenshot, select **Capture area**. You can edit the captured area by resizing the box. If you want to take a scrolling screenshot, click and hold the lower part of the box and scroll the page using your mouse. If you want to quit taking a screenshot, simply press **Esc**.

To access your screenshots, open the extension's menu and click **Show History**. There you can view, download, or delete your screenshots.

How to Take a Full-Page Screenshot Without an Extension

If you feel you already have too many installed extensions, you can take a screenshot using Chrome's Developer Tools. Before trying this method, keep in mind it works better for websites with text-based content rather than web apps.

Follow these steps to take a full-page screenshot:

1. Open Chrome's menu.
2. Head to **More tools > Developer tools**.
3. Click the three-dot icon from the top-right corner and select **Run command**. Also, you can press **Ctrl+Shift+P** on Windows or **Command+Shift+P** on Mac.
4. Type **screenshot** into the search box.
5. Select **Capture full-size screenshot**.
6. Once Chrome takes the screenshot, it should save it into your **Downloads** folder.

How to Take a Full-Page Screenshot in Mozilla Firefox

If you prefer Firefox, here are a few options that you can try:

- [Nimbus](#)
- [Full Web Page Screenshots](#)
- [Awesome Screenshot & Screen Recorder](#)

- [Awesome Screensnot & Screen Recorder](#)
- [Evernote Web Clipper](#)

Nimbus is one of the best Firefox extensions you can use for full-page screenshots.

How to Take a Full-Page Screenshot Using Nimbus

After you've installed Nimbus, click its icon to access the extension's menu. Before taking the screenshot, you can select what you will do after the capture.

Nimbus gives you plenty of options since you can edit the capture, send it to storage, upload it, or download it to your computer.

If you select the **Entire page** option, Nimbus will capture the page content while scrolling on its own. Then, it will open the screenshot in a new tab. You can use its tools to edit the image by adding text, arrows, shapes, and more. You can even blur parts of the image.

If you don't need to capture the entire page, click **Selected & Scroll**. This will bring up a capture box that you can resize. For a scrolling screenshot, click and hold the box's lower part and scroll using your mouse.

How to Take a Scrolling Screenshot With no Extension

Mozilla has a built-in tool that you can use to take a scrolling screenshot. To make it available, right-click the browser's toolbar and select **Customize Toolbar**. Then, click and drag the **Screenshot** tool into the toolbar.

Go to the website you want to take a screenshot of, wait until it's fully loaded, and click the **Screenshot** tool. To take a full-page screenshot, click **Save full page**.

If you only need a scrolling screenshot, drag the cursor on the page to create a capture box. Then, click and hold the lower part of the box and scroll the page.
